

Nutra-Lix Fly Control

While many things in ranching and raising cattle evolve and change, one aspect remains the same and continues to plague ranchers to this day. Herds battle biting flies throughout the summer season. Those flies can literally take a bite out of ranchers' profits as well. Flies are not just irritants to livestock but are economically important to producers due to negative impacts on milk production and calf weaning weights. There are, however, options available to producers to control this summer problem. Which one offers the most benefits with the least amount of input and overall costs to consumers?

Extra time and resources are required for many pour-on and oral fly control options. The Nutra-Lix Dealer saves you the time and resources. Nutra-Lix, Inc. supplements are the perfect options for feedthrough fly control. Like always, the Nutra-Lix supplement is delivered and fed for the producer but they have the bonus of our many fly control choices. Nutra-Lix dealers can supply options for liquid, loose mineral, and barrels. This means low stress and low cost options for producers when coupled with our summer grass program.

Using Nutra-Lix as a summer grass program will give about 1.5 to 2 times return on each dollar invested in Nutra-Lix. The cost will be about \$24 for a 150-day feeding season. The cattle should consume about 150 pounds of Nutra-Lix over that same feeding period which will give 50 to 75 pounds of added gain over non-supplemented cattle. The Nutra-Lix summer program will provide your cattle with their trace mineral needs and provide added protein for better utilization

of the grass as it dries and matures. Nutra-Lix will increase the digestibility of forage by 20 to 30 percent, thus increasing weight gains.

Nutra-Lix has your answers for summer supplementation with fly control including JustiFLY™, Altosid®, and Clarify®.

"Like always, the Nutra-Lix supplement is delivered and fed for the producer but they have the bonus of our many fly control choices. Nutra-Lix dealers can supply options for liquid, loose mineral, and barrels. This means low stress and low cost options for producers when coupled with our summer grass program".

JustiFLY breaks the life cycle of the horn fly, stable fly, house fly and face fly for pennies per head/day. Flies are not just irritants to livestock but are economically important to producers due to negative impacts on milk production and calf weaning weights. JustiFLY can be added to mineral and is now approved to put in liquid feed. Now

priced at just 2 to 3 cents per animal, per day, Altosid® IGR can help ranchers protect their operations from profit-eating horn flies with the best value on pasture. Altosid® IGR is a feed-through solution delivering targeted control of horn flies – the number one pest threat on pasture – protecting cattle health and weight gains. ClariFly® Larvicide is a feed supplement that prevents stable flies and house flies from developing into adults. It is also effective on horn flies and face flies. The active ingredient prevents larvae from developing into pupae. It is not a neurotoxin like an organophosphate or a pyrethroid. ClariFly® Larvicide works as a feed-through, passing through the digestive system and into the manure where flies breed.
